A Partial Bibliography on Largemouth and Smallmouth Bass

John A. North
Research and Development Section

Oregon Department of Fish and Wildlife
2501 S.W. First Avenue
P.O. Box 59
Portland, Oregon 97207

May 1993
PREFACE

This partial bibliography is a compilation of 574 references identified by the author while conducting a literature search for growth related data of largemouth bass (Micropterus salmoides) and smallmouth bass (M. dolomieu) populations. This bibliography is not intended to provide a comprehensive listing of the available literature regarding black bass species, but should aid fisheries managers in quickly reviewing some of the population information available concerning largemouth and smallmouth bass.

Original sources were referenced whenever possible, but many citations for material not readily available have been included. The citations are numbered and arranged alphabetically by author. Following each citation are annotations describing bass species, location, and article content based on 16 subject key words. In most cases, locations listed in annotations refer to the locality of research conducted by the author, but articles may contain information from other geographic locations. These annotations will hopefully allow researchers to select references for more detailed review, but are not intended to provide a complete epitome of article content.

Geographic and subject indices for each species are included. The subject index includes the following general headings: bibliography, diet, exploitation, growth, habitat, life history, management, mortality, species interaction, spawning, stocking, survey, survival, tagging, temperature, and tournament. Life history includes any reference to biology, distribution, longevity, maturity, movement, parasites, reproduction, sexual dimorphism, and related subjects not included elsewhere in the index. Most references within the subject index are listed under multiple headings.
