1 = Huntley Park mark-recapture estimate of coho freshwater escapement to the Rogue Basin above Huntley Park (~ River Mile 8).

This includes returns to Cole Hatchery, natural spawning grounds, freshwater harvest and mortality between Huntley and Cole River hatchery.

2 = Estimated freshwater harvest of coho salmon in the Rouge basin, based on Angler Harvest Cards (see: <http://www.dfw.state.or.us/resources/fishing/sportcatch.asp>).

Null values have yet to be published.

3 = Number of adult coho collected and retained at Cole Rivers Hatchery. These numbers do not include coho collected and released alive back into the wild.
