

Estimated Abundance of **Wild** Adult Coho spawners in the Oregon portion of the Lower Columbia Coho ESU
 Based on GRTS Random Sampling Methods for Rivers, plus Dam and Hatchery counts for un-sampled areas above counting stations.

05/21/19

n.s. = Not sampled. n.a. = Not applicable.

a = Number of unmarked adult coho passed above otherwise impassable, listed counting station. Note: The 2007-2009 Sandy Hatchery count is the number released above the old Marmot Dam site. The dam was removed in Oct 2007, thus the count is included in the spawning ground survey estimate area and not added in. Starting in 2010 unmarked fish were released above the Sandy Hatchery weir. This area is not sampled, so these fish are added into the total abundance.

b = Spawning ground estimate does not include area above listed counting stations. Note: Sandy estimate is below Marmot Dam only from 2002-2006, and whole basin from 2007 on.

c = Hatchery:Wild ratios based on scale data not carcass fin marks for this population.

Estimated Abundance of **Hatchery** Adult Coho spawners in the Oregon portion of the Lower Columbia Coho ESU
 Based on GRTS Random Sampling Methods for Rivers. Counts include fish spawning naturally; no Hatchery returns.
